OrthoViewer is a trademark of 3Shape.

Choosing the right finish for your Digital Study Models (DSM) can be confusing, but it doesn't need to be. NorthStar currently offers three different DSM finishes: Standard, Progress, and Unbased Progress. We can create DSMs from hard models, traditional impressions, or digital impression files. Please see the chart above to determine which DSM finish is best for you.

\*\*Please note that if you submit a digital impression file for the creation of a DSM, you will automatically receive the Standard Finish.
